

Ana Lead Tracker Sales Engine Guide

A complete guide to the methodologies, features, and daily workflow
for closing Ana Receptionist deals with Phoenix-area SMBs.

Itxaz | Internal Use Only | 2026

Table of Contents

1. What Is the Sales Engine?
2. The Methodologies Behind It
3. Daily Cockpit
4. Live Call Interface
5. Objection Bible
6. The Daily Workflow
7. Quick Reference

1. What Is the Sales Engine?

The Sales Engine is the conversion half of the Ana Lead Tracker. While the Lead Tracker finds and scores prospects, the Sales Engine is where you actually pick up the phone and close them.

It is built specifically for **high-ticket consultative sales** in the \$20K-\$50K range. You are not doing spray-and-pray cold calling. You are making 10-15 highly targeted calls per day to pre-researched, pre-scored businesses that have a real need for Ana Receptionist.

The Sales Engine has three pages:

Page	Purpose
Daily Cockpit	Your mission control. Shows who to call today, in what order, with what script.
Live Call	Your in-call companion. Openers, objection handlers, discovery questions, notes, and call close-
Objection Bible	Your reference library. Every objection you will hear, with tested handlers in English and Spanish

Key concept: Both Josue and Santiago share the same database. When one person calls a prospect and updates the status, the other person sees it immediately. No double-calling, no lost information.

2. The Methodologies Behind It

The Sales Engine is not a generic CRM. Every feature is built on specific, proven sales methodologies chosen for one reason: they work for high-ticket B2B consultative sales to SMB owners. Here are the four frameworks woven into the system.

Connor Murray's Oracle 3-Part Value Statement

Used in: Personalized Openers (Daily Cockpit + Live Call)

Connor Murray is the founder of Oracle and one of the top cold-call trainers in B2B sales. His 3-Part Value Statement is the framework behind every AI-generated opener in the system. The structure:

- **Part 1 - Opening (Assumptive Formality):** A warm, casual greeting with downward inflection. You introduce yourself by name and move fast. No permission-asking ('do you have a minute?'), no nervous filler. Example: 'Hey Maria, this is Josue from Itxaz - how are you?'
- **Part 2 - Value Statement (30-45 seconds):** Who you are, why specifically THEM (cite their industry and a specific pain point), the outcome/transformation (not features), a reference to Ricardo Diaz Insurance as proof, and what you want (a meeting next week).
- **Part 3 - Close (Assumptive Next Step):** A specific calendar ask. 'How's Wednesday at 10 or Thursday at 2?' Never ask IF they want to meet. Assume the meeting is happening.

Why this works for Ana deals: SMB owners are busy. They get cold calls daily. The 3-Part framework respects their time (45 seconds max), leads with THEIR pain (not your product), and closes with a specific ask instead of a vague 'let me send you info.'

Connor Murray's Acknowledge-Reframe-Reclose (ARC)

Used in: Objection Bible + Live Call Objections Tab

The same Connor Murray framework, applied to handling objections. When a prospect pushes back, you follow three steps:

- **Acknowledge:** Validate their concern genuinely. Make them feel heard. 'I hear that a lot, and it is a real concern.' Never argue or dismiss.
- **Reframe:** Offer a new angle with proof, data, or a story. This is where you shift the conversation without being pushy. Use Ricardo Diaz Insurance as social proof when it fits naturally.
- **Reclose:** Bring it back to a specific next step. 'Worth seeing how it works for them? I have Wednesday at 10 or Thursday at 2.'

Teddy Frank's Hyper-Relevant Discovery (UserGems)

Used in: Live Call Discovery Tab

Teddy Frank, head of sales at UserGems, teaches that discovery questions should not be generic. Every question should tie directly to the prospect's actual pain. The system includes 8 discovery questions designed specifically for Ana Receptionist prospects:

#	Topic	What You Learn
1	Call volume	How many inbound calls per day - validates the scoring
2	Current handling	What happens when everyone is busy - reveals the gap Ana fills
3	Loss	What happens to unanswered calls - quantifies the pain
4	Opportunity cost	Dollar value of missed calls - builds the ROI case
5	Bilingual need	Spanish-speaking customer base - Ana's competitive advantage
6	Decision maker	Who else is involved - prevents 'I need to ask my partner'
7	Urgency	Seasonal or staffing pressure - creates timeline
8	Timeline	How fast they want to move - closes the loop

Teddy's rule: Listen 2x more than you talk. These questions are designed to get the prospect talking about their pain, not for you to pitch. The pitch comes after they have told you their problem.

Jason Bay (Outbound Squad) + Superhuman Prospecting

Used in: Call List Curation + Overall Sales Engine Design

Jason Bay's philosophy: fewer, better calls beat high-volume dialing. Superhuman Prospecting's Human-to-Human (H2H) approach adds that every interaction should feel like a conversation between two people, not a script being read at someone.

These principles shaped the Sales Engine design:

- **10-15 calls per day, not 100.** The Daily Cockpit defaults to 10 calls because that is the elite range for high-ticket sales. Quality over volume.
- **Every call is pre-researched.** You never dial a number without knowing why that business is a fit, what their score is, and what evidence supports the call.
- **AI-personalized openers.** Claude reads each prospect's data and writes a unique opener in your voice, so you sound like a person who did their homework, not someone reading a template.

- **Bilingual as a superpower.** Everything in the Sales Engine works in English and Spanish. In the Phoenix market, being able to switch to native Spanish is a competitive advantage most competitors cannot match.

3. Daily Cockpit

The Daily Cockpit is your starting point every morning. It answers one question: **who should I call right now, and what should I say?**

How the Call List Is Built

The system does not just sort leads by score. It builds a **smart mix** designed for maximum pipeline velocity:

Portion	Source	Why
50%	Fresh leads (Research Done / New)	Highest-score prospects you have not called yet. These are your best new prospects.
30%	Follow-ups (Call 1 or Call 2 Made)	Prospects who did not convert on the first call. Most deals close on the 2nd call.
20%	Demo confirmations (Demo Booked)	Prospects with a demo scheduled. A quick confirmation call reduces no-shows.

Controls

- **Who's calling?** Select your name (Josue or Santiago). This personalizes the AI-generated scripts with YOUR name.
- **Language:** English or Spanish. Switches the script language and the Live Call interface language.
- **List size:** 5, 10, 15, or 20. Default is 10, the elite benchmark for high-ticket sales.

Today's Stats

Four real-time metrics tracked per caller per day:

- **Calls today:** How many calls you have made today.
- **Connected:** How many times you reached a human (not voicemail, not no answer).
- **Demos booked:** The number that matters most.
- **Connect rate:** Connected / Calls. Elite benchmark is 20-30%.

Using the Personalized Opener

Each lead card has an expandable section labeled '**Personalized opener (Connor Murray 3-Part Framework)**'. Click **Generate Script** and Claude will write a custom 30-45 second opener based on that

specific business's industry, city, score, and key evidence. The script uses YOUR name as the caller.

Tip: Generate scripts for your top 3-5 calls before you start dialing. Read them out loud once to get comfortable. Do not read them verbatim on the call - use them as a guide for the flow and key points.

Starting a Call

Click the blue **Start Call** button on any lead card. This:

- Opens the **Live Call** interface for that prospect
- Starts a timer so you can track call duration
- Creates a record in the database so the call is logged
- Carries over any script you already generated

4. Live Call Interface

The Live Call page is your in-call companion. It has five tabs, each serving a specific purpose during the conversation. Think of it as your co-pilot while you are on the phone.

Tab 1: Opener

Shows the personalized script you generated from the Cockpit. If you did not generate one, you can do it here with the Generate Script button. Use this as your guide for the first 30-45 seconds of the call.

Tab 2: Objections

When the prospect pushes back, open this tab. Every objection from the Objection Bible is listed here with the full Acknowledge-Reframe-Reclose handler, localized to your selected language.

For each objection, you have two buttons:

- **Handled it:** The prospect engaged positively after your reframe. This logs a success and improves the handler's success rate in the analytics.
- **Didn't work:** The prospect did not budge. This is equally valuable data - over time you will see which handlers need to be rewritten.

Tab 3: Discovery

Eight pre-written discovery questions based on the Teddy Frank methodology. Available in English and Spanish. Use these after your opener lands and the prospect is engaged.

When to use Discovery vs. Close: If the prospect says 'tell me more' or asks a question, switch to Discovery. If they seem ready, skip straight to a calendar ask. Discovery is for warming up interested-but-not-convinced prospects.

Tab 4: Notes

A simple text area for live note-taking during the call. Click Save to persist. These notes are attached to the call record and visible in the lead's history. Write what matters: names mentioned, objections raised, follow-up promises, tone of the conversation.

Tab 5: Close Out

When the call ends, use this tab to log the outcome. Every field matters for future analysis:

Field	What to Enter
Outcome	What happened: Demo Booked, Callback Requested, Voicemail Left, Gatekeeper Only, No Answer
Connected	Did you reach a human? Check if yes.
Reached DM	Did you speak to the decision maker? Critical for pipeline accuracy.
Conversation quality	Rate 1-10. Be honest - this trains future lead scoring.
Estimated deal value	Default \$35K. Adjust based on the prospect's size and needs (\$20K-\$50K range).
Next action	What is the specific next step? e.g., 'Send demo recap email Friday'
Next action date	When should the next step happen?

Automatic Status Updates

When you close out a call, the system automatically updates the lead's status based on the outcome:

- **Demo Booked** sets status to 'Interested - Demo Booked'
- **Voicemail Left** sets status to 'Voicemail Left'
- **Not Interested / Do Not Contact** sets the matching status
- **Other outcomes** (Callback, Gatekeeper, No Answer) auto-advance the call counter: New becomes Call 1 Made, then Call 2 Made, then Call 3 Made

Why this matters: After Call 3 with no progress, the lead falls out of the active call list. This prevents you from endlessly calling unresponsive prospects and focuses your energy on better leads.

5. Objection Bible

The Objection Bible is your reference library of every objection you will hear when selling Ana Receptionist, with tested handlers in English and Spanish.

Pre-Loaded Objections

The system comes with 10 objections based on real sales conversations with Phoenix SMBs. Each one has been crafted using the Acknowledge-Reframe-Reclose framework:

Objection	Category
'We already have a receptionist'	Competition
'That sounds expensive'	Price
'My customers won't trust talking to AI'	Trust
'We don't get that many calls'	Fit
'Just send me some info'	Information
'I need to ask my partner'	Authority
'How is this different from voicemail?'	Fit
'We tried something like this before'	Trust
'Not ready right now, call me in 6 months'	Timing
'What about complex or Spanish calls?'	Fit

Analytics

The Objection Bible tracks three metrics at the top of the page:

- **Objections in bible:** Total number of objections cataloged.
- **Total encounters:** How many times objections have been encountered across all calls.
- **Handler success rate:** What percentage of the time the Acknowledge-Reframe-Reclose handler resulted in a positive outcome. This is the number to watch - if a handler drops below 50%, it is time to rewrite it.

Editing and Adding Objections

Every objection has an Edit form where you can update the English and Spanish text for all four parts (objection, acknowledge, reframe, reclose). You can also add entirely new objections using the 'Add new objection' form at the bottom of the page.

Best practice: After every call where you hear something new, add it to the Bible immediately. If a handler did not work, update the reframe with what you wish you had said. The Bible gets stronger with every call.

6. The Daily Workflow

Here is the recommended daily workflow for using the Sales Engine. This takes about 2-3 hours and is designed for maximum impact with minimum wasted effort.

Step 1: Prep (10 minutes)

Open the Daily Cockpit. Select your name and language. Review your top 10 call list. Generate scripts for your top 3-5 prospects. Read each script out loud once.

Step 2: Call Block (60-90 minutes)

Work through your list top to bottom. Click Start Call to enter the Live Call interface. Use the Opener tab for the first 30 seconds. If the prospect raises an objection, open the Objections tab. If they engage, switch to Discovery. Take notes in real time.

Step 3: Close Out (2 minutes per call)

After each call, immediately close it out in the Close Out tab. Be honest about conversation quality. Set a specific next action with a date. The system auto-updates the lead status for you.

Step 4: Debrief (10 minutes)

Check your Today's Stats: calls, connections, demos, connect rate. If an objection stumped you, update the Bible with a better handler. If a script worked particularly well, note what made it different.

The golden rule: 10 great calls beat 50 mediocre ones. Every call in your list has been AI-scored and ranked. Trust the system, prepare for each call, and focus on having real conversations.

7. Quick Reference

Lead Statuses

Status	Meaning	Shows in Call List?
New	Just entered the system, not yet researched	Yes (fresh)
Research Done	AI-scored, ready to call	Yes (fresh)
Call 1 Made	First call attempted	Yes (follow-up)
Call 2 Made	Second call attempted	Yes (follow-up)
Call 3 Made	Third call attempted	No
Voicemail Left	Left a voicemail	No
No Answer (3+ attempts)	Could not reach after multiple tries	No
Interested - Demo Booked	Demo is scheduled	Yes (confirmation)
Not Interested	Declined (reason required)	No
Do Not Contact	Explicit opt-out	No
Closed Won	Deal closed!	No
Closed Lost	Deal lost	No

Call Outcomes

Outcome	Auto-Sets Status To
Demo Booked	Interested - Demo Booked
Callback Requested	Auto-advances call counter (Call 1 > 2 > 3)
Voicemail Left	Voicemail Left
Gatekeeper Only	Auto-advances call counter
No Answer	Auto-advances call counter

Outcome	Auto-Sets Status To
Not Interested	Not Interested
Wrong Number	Auto-advances call counter
Do Not Contact	Do Not Contact

Scoring Criteria

Criterion	What It Measures (1-10)
Call Volume	How many inbound calls the business handles daily
Missed Call Pain	How much revenue they lose from missed or abandoned calls
Bilingual Opportunity	Whether they serve Spanish-speaking customers
Tech Readiness	Existing tech sophistication and willingness to adopt AI
Ease of Closing	Decision-maker accessibility, budget signals, buying readiness
Urgency	Time-sensitive pain: seasonal demand, growth, staff turnover
